

Saihaj Kohli

Aspiring Software Engineer & Tech-Driven Business Innovator

[437-424-5150](tel:437-424-5150) | sskohli@uwaterloo.ca | [linkedin.com/in/saihaj-kohli](https://www.linkedin.com/in/saihaj-kohli) | github.com/SaihajKohli1 | [portfolio website](#)

EDUCATION

University of Waterloo & Wilfrid Laurier University

Bachelor of Computer Science / Bachelor of Business Administration (Double Degree, Co-op)

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C++, C, HTML/CSS, SQL, Java, Golang

Frameworks/Libraries: React, FastAPI, Express, Node.js, Redux, Tailwind CSS

Tools: AWS, Docker, Git, MongoDB, PostgreSQL, MySQL, Railway, Vercel

AI Tools: N8n, Claude Code, Codex, AWS Kiro

EXPERIENCE

AI Software Engineering Intern

May 2026 – Aug 2026

Liquid Analytics

Toronto, Ontario

- Worked on the **Forward Deployed Engineering** team, building **6 customer-facing AI demos** and **11 workflows** by pairing directly with customers on their use cases
- Engineered a **goal-cascading decision engine** with a **Bayesian model**, propagating revenue targets through region, sector, and rep across **200+ accounts** to compute quotas and flag at-risk reps
- Built the engine in **Svelte, JavaScript, and Python**, integrating **Claude Opus via AWS Bedrock** for reasoning and architecting the **SQL schema** supporting **14 workflows**

Software Engineering Intern

Mar 2026 – Apr 2026

Tabi Well-Being

Toronto, Ontario

- Built the initial product demo in **React** and **TypeScript** with a companion iOS app in **Swift**, shipping **4 wellness features**: daily mood tracking, AI-assisted journaling, an onboarding quiz, and a mental health chatbot
- Engineered a **RAG-based chatbot** powered by **Ollama**, grounded on **200+ curated wellness sources**, and an AI-assisted journaling feature that generated personalized responses based on users' daily journal entries
- Implemented **safety guardrails** across both AI features, including input/output moderation and response filtering, reducing unsafe and off-topic responses by **90%+**

Software Engineering Intern

May 2025 – Aug 2025

Enterone Corp

Toronto, Ontario

- Created an **admin managing software** to intake, review, and approve **partner workshop examinations**, automatically evaluating submitted assessments to determine pass/fail status
- Developed a streamlined internally connected system offering access to every company, user, and their activity in a visually simple format to improve organizational productivity and efficiency by **33%**
- Built **AWS Lambda Functions** to extract data from **Cognito User Pools & MySQL** database to connect with the **React.js** frontend using **Amazon API Gateway**

PROJECTS

LIFESAVER 🚑 🧠 | *React, Vite, Node.js, Express, TypeScript, Groq LLaMA 3.1 8B, Twilio Voice, Supabase*

- Won 1st Place Overall** at the AI & Data Science for Good Hackathon 2026 (Waterloo Data & AI Institute, **200+ participants**) by building a 911 emergency bridge app, enabling **3M+ Rohingya speakers** to access emergency services via a visual form, reducing language barriers by routing calls through **Twilio** on their behalf
- Engineered a real-time **AI voice pipeline** using **Groq LLaMA 3.1 8B** and **Twilio Voice TTS/STT** to process user inputs (GPS via Nominatim, symptoms, injuries) and generate structured English responses for dispatchers, delivering a working end-to-end system in **under 24 hours**

HydroCool Connect 🌡️ 🧠 | *Python, FastAPI, JavaScript, Google Maps API, Arduino*

- Won 3rd Place** at **GoodHacks 24** (GreenHouse, University of Waterloo, in partnership with the City of Kitchener) on a **4-person team** tackling heat inequity across Kitchener
- Built the **software platform**: a mobile alert system using **open data from Environment Canada** and **Google Maps API** to notify low-income residents of nearby cooling locations during heat events
- Built the **Arduino circuit** powering the team's fan and misting tower prototype, providing temporary on-site heat relief for Kitchener's most heat-vulnerable neighborhoods
